

SOUTHERN RESIDENT KILLER WHALES (SRKW)

Urgent Topic!

The Problem

Southern Resident Killer Whales
are currently an **endangered**
species.

Their main food source, **chinook salmon**, is becoming less available due to **overfishing** and **habitat loss**.

The Situation

There are **3 pods** remaining in our oceans: J, K, and L.

However, there are only **73** individual SRKW's, and their population is declining.

The Solution

- Donate to Marine Protection Programs!
- Buy local, not international
- Buy earth friendly and organic products
- Volunteer with beach clean-ups and other similar organizations
